

AUDIO VISUAL SOLUTIONS FOR THE NAVAL MEDICAL CENTER IN SAN DIEGO

OBJECTIVE The Naval Medical Center's rehabilitation facility needed an integrated AV supervision and classroom multimedia system. The new system would be used to supervise intern and paraprofessional counselors in the provision of patient care, and to enhance the learning environment of patients receiving psycho-educational material vital to their rehabilitation. The overall intent of the new system was to significantly improve patient care.

SOLUTION VectorUSA designed and installed an integrated, non-intrusive IP video surveillance system used to monitor and critique live and archived patient counseling sessions that occurred in a dozen patient care rooms across the two clinics. Separately, VectorUSA designed and installed an integrated AV solution to enhance overall technical and interactive presentation capabilities in 10 classrooms across the two sites.
